Mod 07 BASH Strings Tutorial

Use the same method to set up the `Mod07Tutorial_starter.sh` script in your openSUSE environment as you did in the Mod 06 Homework.

This string has the lyrics of two songs mixed together in a zipper merge (first word song one, first word song two, second/second, third/third, etc).

Transform the string to change the colons to spaces then use `cut -d` to create your array. Use `sed` to replace the pipe symbol `|` with a new line `\n`. Remember to use `echo -e` as needed.

Print out words that appear in both set of lyrics, like my demo. List each word only once and sort them alphabetically by piping to `sort`. You must capture all the same duplicates. Note that I'm capturing the "easy" duplicates here, rather than the expanded and more accurate duplicate detection.

As usual (and always in this class) you can only use the tools we've explicitly covered in class.

The Lyrics

Ayer conocí un cielo sin sol
Y un hombre sin suelo
Un santo en prision
Y una canción triste sin dueño
Y conocí tus ojos negros
Y ahora sí que no puedo vivir sin ellos yo
Le pido al cielo solo un deseo
Que en tus ojos yo pueda vivir
He recorrido el mundo entero
te vengo a decir

Ojos Así - Shakira

Quisiera cambiarle el final al cuento
Las barras y los tragos han sido testigo
De el dolor que me causaste y to' lo que hiciste conmigo
Un infeliz en el amor, que aun no te supera
Que ahora camina solo sin nadie por todas las aceras
Preguntándole a Dios si en verdad el amor existe

Amorfada – Bad Bunny
