

# Summarizing Data Using Tabulate

Use Tabulate to interactively summarize data and construct tables of descriptive statistics.

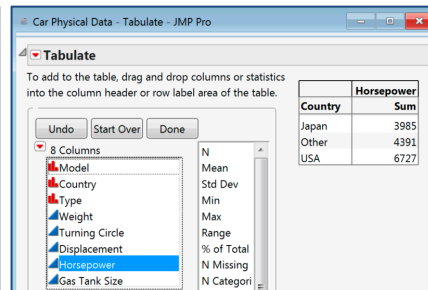

## Drag and Drop to Summarize Data

- From an open JMP® data table select **Analyze > Tabulate**.
- Drag and drop variables from the column list to the drop zone for rows and columns.
  - Country** (below, left) is in the rows drop zone – the number of observations per country is displayed.
  - Horsepower** (middle) is in the columns drop zone as an analysis column – the sum for horsepower is displayed for each country.
- Drag and drop one or more summary statistics from the middle panel into the results area. **Mean** and **Std Dev** are displayed for each country (below, right).

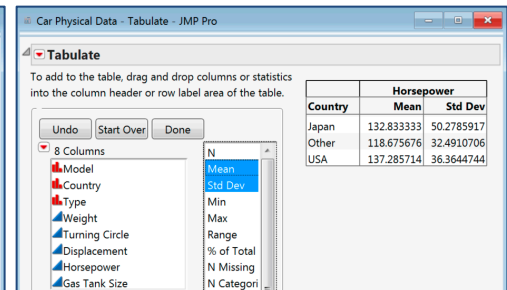

Car Physical Data.jmp (Help > Sample Data Library)

Country	N
Japan	30
Other	37
USA	49

Country	Horsepower Sum
Japan	3985
Other	4391
USA	6727

Country	Mean	Std Dev
Japan	132.833333	50.2785917
Other	118.675676	32.4910706
USA	137.285714	36.3644744

## Tips:

- Click **Undo** to reverse the last change, or use **Start Over** to clear the display.
- Click and drag variables in the table to rearrange, or right-click on a variable to delete or change the format.
- To change the numeric formats (i.e., decimal places), use **Change Format** at the bottom of the window and select the desired format.
- To add **new summary panels** to the table, drag and drop the new variable to the bottom or left of the table. Here, Type has been added to the bottom of the original table.
- To **add additional row or column variables**, drag and drop a new variable on either side of the current variable in the table. Here, Type has been added next to Country and Horsepower has been added next to Weight.
- To create a data table, click **Done**, then select **Make Into Data Table** from the **top red triangle**.
